# Stallasana

*An excellent solution to improving farm hygiene and intensifying the fertilizing properties of bedding.*

**Stallasana** is distributed on the bedding at least twice a week and assures the following advantages:

- Drier bedding;
- Notable decreases in the manifestation of acute mastitis and lameness;
- Improvement in environmental conditions due to the almost to-

tal disappearance of bad smells.

The fumes from ammonia which are released from the substrate, are stopped by the high pH level in the product (pH 3,5).

The use of **Stallasana** does not present any contraindications for respiratory and tegumentary apparatuses and for extremity of limbs.

**Stallasana** enriches manure with phosphorus, sulphur and calcium and favours a balanced fermentation of the organic material.

## DIRECTIONS FOR USE

0.5-1 kg per cow	<b>CATTLE BREEDING</b>
0.5-1 kg each sqm	<b>PIG BREEDING</b>
0.4-0.8 kg each sqm	<b>SHEEP BREEDING</b>
0.3-0.6 kg each sqm	<b>BIRD BREEDING</b>
