# Flexil P

Formula rich in assimilable phosphorus

- Stimulates flowering
- Supplies energetic basis of metabolism
- Favours fruit enlargement

The use of **Flexil P** is recommended on all crops that particularly need phosphorus and in phases prior to flowering or production of seeds. The phosphorus works on the synthesis of phosphate molecules, responsible for transportation and the energetic

exchanges of all fundamental metabolic processes for a correct development of vegetable life. The formulation enriched by surfactants and wetting agents allows the product to be quickly absorbed and transported to the plant.
