

Flexil

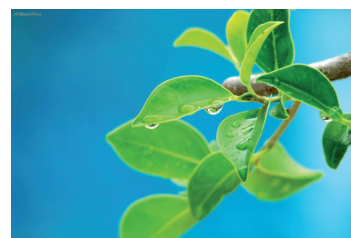

HIGH LEAF ABSORPTION EFFICIENCY FOLIAR FERTILIZER LINE

Effectiveness

- ✓ Nitrogen phosphorus and potassium applied directly on the leaves.
- ✓ High foliar absorption thanks to the presence of natural surfactants.
- ✓ All formulas contain EDTA chelated microelements.
- ✓ High solubility and miscibility.
- ✓ High purity of raw materials used.

Activity

FLEXIL line is composed by 4 crystalline formulas and 1 liquid formula and are produced in order to supply nutrient to the crops directly on the leaves. The formulations were adapted to the different growth stages of crops (vegetative growth, flowering and fruit set, fruit enlargement, ripening). Used consistently throughout the crop growth, **FLEXIL** formulas represent an additional nutritional support that integrates and optimizes plant activities improving plant production. **FLEXIL** formulas are applied directly on the leaves and, thanks to the presence of natural surfactants, facilitate the absorption of nutrients by reducing the formation of salts on leaf surface (after evaporation of water of sprayed) that can block the stomatal opening of leaves. **FLEXIL** have a good solubility and can be mixed with the most common products used in agriculture to reduce the costs of the application.

Packaging:

Flexil, Flexil N, Flexil P, Flexil quality: 1 kg

Flexil LQ: 1-5 l
